

Secutor CAT

SECUTOR CAT

ThreatGuard was the first to introduce compliance technology based on NIST's Security Content Automation Protocol (SCAP). Now with the Secutor Compliance Automation Toolkit (S-CAT), 3rd party vendors can incorporate it into their solutions quickly and easily.

S-CAT is a collection of libraries and executables that work together to form a comprehensive security compliance system. Developers can customize solutions by using only those components required to provide the desired functionality. The modules are fast, lightweight and include all the power and efficiency you've come to expect from ThreatGuard. With S-CAT, implementing standard compliance solutions has never been so easy.

Key Features:

Efficient & Flexible

- Eliminates the time required for custom development
- Delivered as a pluggable module with a rich API set for easy integration
- Can be scripted and run from a logon script or existing enterprise management system like Altiris or SMS.
- Agent can be accessed directly via SOAP-RPC model or via local broker library
- Supports all platforms for OVAL or XCCDF content

Compliance Auditing, Exceptions & Remediation

- Supports local exceptions-based policy deviations
- Based on first assessment engine to pass OVAL 5.x certification
- Results available as standards-compliant reports or raw XML data sets

Architecture & Supported Platforms

- SOA Ready (supports SOAP-RPC)
- Supports agentless usage over the network for Windows, Linux, Solaris, HP-UX and other operating systems and device types
- .Net framework version 2.0 or greater, or any Java Runtime Environment of version 1.5 or greater

Targeted Solutions

- SCAP compliance for building custom solutions
- OEMs and systems integrators
