

Secutor auditor

SECUTOR AUDITOR

Secutor Auditor pushes Secutor Prime to a new level. Designed for mobile auditing teams, inspector generals, and offices that wish to check for image drift, Auditor includes all the powerful features of Secutor Prime with an unlimited assessment license that security auditors require. The ability to run the program from a thumb drive makes it ideal for security auditing teams that evaluate compliance at multiple locations or customer sites. Like all Secutor products, evaluation results can be imported into Secutor Magnus for analysis and reporting.

Key Features:

Auditing Flexibility

- Runs on remote computers without agents or on individual computers via thumbdrive or local installation
- Upload results into management server for detailed analysis and reporting

Use of NIST Security Content Automation Files

- Direct consumption of NIST-developed eXtensible Configuration Checklist Descriptions Format (XCCDF) and Open Vulnerability and Assessment Language (OVAL) definition content
- Provides mapping of security checks to governing requirements
- Provides runtime notes, allowing auditors and security engineers to verify and validate assessment decisions

Security Patch Checks & Vulnerability Assessment

- Automatically determines that all required security patches are in place
- Performs vulnerability assessment of operating system and major applications
- Automated update system keeps application and assessment content current

Configuration and Security Remediation & Undo

- Automatically modifies configuration and security settings to address any discrepancies
- Perform remediation undo of individual rules or full system restore

Standards-Based Assessment System

- Continuously updated to stay current with latest XCCDF and OVAL releases
- SCAP-validated solution

Security Reporting & Data Export

- Includes HTML-based reports suitable for printing and drill down
- Secutor Auditor reports include summary and detailed benchmark scoring
- Exports CSV, OVAL, XCCDF, and Magnus results files

Architecture & Supported Platforms

- Endpoints: Microsoft Windows, Solaris, Red Hat Enterprise Linux, more
- Requires Java Run-time Environment 1.4x or greater (included)

Targeted Solutions

- Compliance evaluations for professional auditors
- Part of the Secutor Prime product line
